

EXAMPLE:

```
ADDWF, f, d, a
```

```
FSR2H:FSR2L = 0x0A20
```

Locations in the region from the FSR2 pointer (A20h) to the pointer plus 05Fh (A7Fh) are mapped to the Access RAM (000h-05Fh).

Special File Registers at 460h through 4FFh are mapped to 60h through FFh, as usual.

Bank 4 addresses below 5Fh can still be addressed by using the BSR.
