

Warning

'Force update design flow' updates the invalidated tool states of 'Synthesize' and 'Place and Route' to PASS state. This works only for the cases where tool invalidation happened for one of the below reasons:

Modification/Addition/Deletion of design sources
Modification/Association/Dissociation of design constraint files

Please note that the current tool outputs may be out of sync with the current inputs (design sources or constraints) if they were modified functionally. Do you wish to continue?

Don't show again.
