

## TARGET ADJUSTABLE REGULATOR

**A200:**  
 - Cut-strap used for full separation of target power from the level shifters and on-board regulators.  
 - For current measurements using an external power supply, this strap could be cut for more accurate measurements. Leakage back through the switch is in the micro ampere range.  
 J201  
 - For current measurements using the on-board power supply, this strap must be cut and an ammeter connected across.

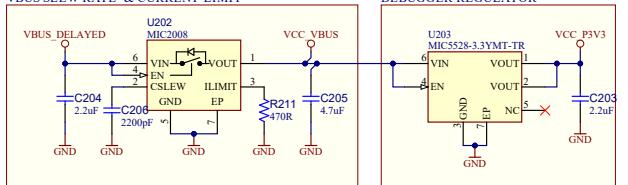

**MIC3533:**  
 Vin: 2.6V to 6V  
 Vout: 1.25V to 5.1V  
 I<sub>max</sub>: 500mA  
 Dropout (typical): 50mV @ 150mA, 160mV @ 500mA  
 Accuracy: 2% initial  
 Thermal shutdown and current limit

Maximum output voltage is limited by the input voltage and the dropout voltage in the regulator, ( $V_{max} = Vin - dropout$ )

## ADJUSTABLE OUTPUT AND LIMITATIONS:

- The DEBUGGER can adjust the output voltage of the regulator between 1.25V and 5.1V to the target.
- The voltage output is limited by the input (USB), which can vary between 4.40V to 5.25V.
- The level shifters have a minimal voltage level of 1.65V and will limit the minimum operating voltage allowed for the target to still allow communication.
- The MIC94163 has a minimal voltage level of 1.70V and will limit the minimum voltage delivered to the target.
- Firmware configuration will limit the voltage range to be within the target specification.

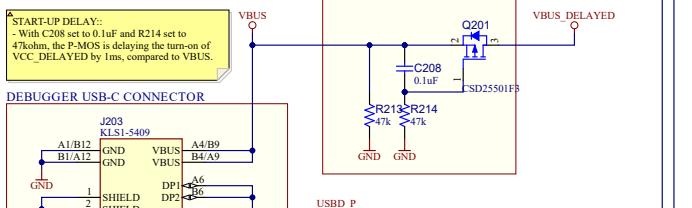

## VBUS SLEW RATE- & CURRENT-LIMIT

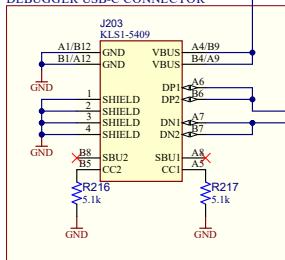

**SLEW RATE LIMIT:**  
 - With C206 set to 2200pF, the slew rate of VCC\_VBUS is limited to 2 V/ms by the power switch MIC2008.

**CURRENT LIMIT:**  
 - With R211 set to 470ohm, the current through the power switch MIC2008 is limited to 500mA.
